BillBase improvements.

I have discussed with my colleague about the project, and we agreed to go a little further.
Here are some comments on the app and website.

APP
- Better cropping options
- Zoom on image
- Not group by date
- Date and timestamp (hidden fields in listview)
- Datepicker on Docdate field (new field)
- Catagory dropdown (new field)
    I. Maybe 5 predefined catagories
- Delete with swipe

WebSite
- Single pageviev
- Upload/change/delete entries
- Create/delete/change categories
- Authentication backend/*.php

Do you think you can make these improvements.

Please also take note of the example screendumps from Genius Scan+ APP, which are in
the other document I sent.I think this design is pretty nice. I am quite fond of the orange
color.

And perhaps we should concentrate on the Iphone app and the website for starters.

Looking forward hearing from you.

Regards
jonhard

NB: My colleague is a little worried that the hourly rate is too high. He has a lot of
experience with outsourcing to China and India, and he has not experienced such high
hourly rates.
